

**Clarix Flo is a human birth tissue injectable that may support joint and soft tissue healing as an alternative to corticosteroids or opioids.*

Ask your doctor how our wide range of adjunct therapies can help support regenerative and functional recovery.

These therapies may help you **recover and return to function**. We provide Mother Nature's most natural gift of healing so you can get back to the life you love. Without surgery, without delay.

Clarix Flo injectable may help diminish musculoskeletal discomfort and improve function and range of motion.

A Note About Safety

After more than 680,000 procedures, there have been no reports of disease transmission or tissue rejection from amniotic tissue allografts produced by BioTissue Surgical or its family of companies. While these clinical experiences are valid, it is not possible to predict or warrant specific results, nor is it possible to guarantee patient and/or clinical satisfaction.

BioTissue Surgical products are authorized under the regulations of the U.S. Food and Drug Administration (FDA) governing the manufacture and distribution of Human Tissue Products. They are marketed as structural tissue products for homologous use and are used by physicians as barriers, wound coverings, conduits, and/or cushions in the treatment of their patients.

Is Pain Slowing You Down?

Keep Moving
Without Surgery

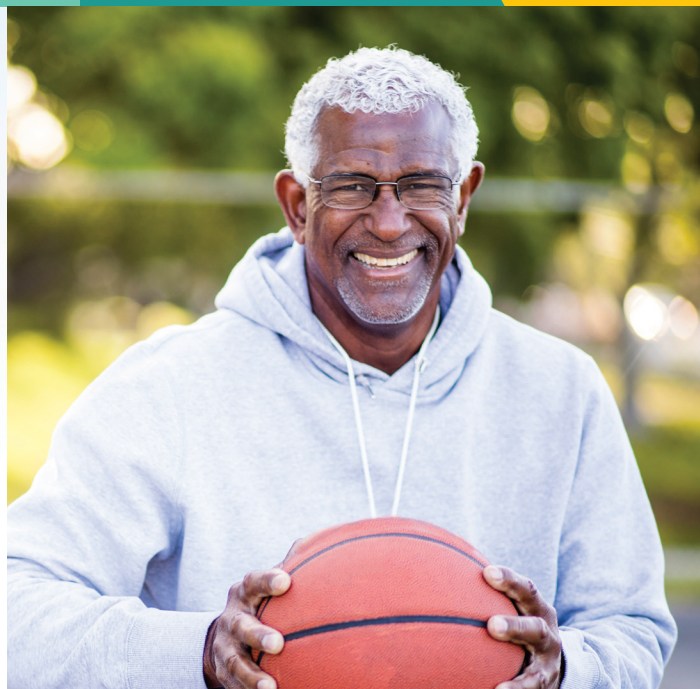

Return to your daily life activities.

Maintaining an active lifestyle after suffering from a debilitating injury or joint disease can be difficult. Inflammatory or degenerative conditions can severely restrict your activity, leaving you with extreme pain and disability. Delays in wound healing may lead to chronic conditions with complications including severe discomfort.

At BioTissue Surgical, we are leveraging the science of regenerative medicine to help manage discomfort and restore function for daily life activities with our comprehensive family of innovative adjunct therapies.

2

The Power of Mother Nature

These natural tissue-based therapies have been shown to help create an ideal environment for regenerative healing. This may lead to faster rehabilitation, faster recovery and faster return to your daily activities.

How is the tissue acquired?

BioTissue Surgical obtains the tissue used in products through voluntary donation programs across the U.S. Before donation, donor mothers delivering through live, healthy C-section are screened to ensure safety, based on requirements established by the U.S. Food & Drug Administration (FDA) and the American Association of Tissue Banks (AATB).

4

To support regenerative healing and functional recovery in...

- Soft tissue and nerve repair
- Bone and joint reconstruction
- Cartilage debridement and repair
- Fractures and non-unions
- Complex orthopaedic reconstruction
- Osteoarthritis
- Facet Joint conditions
