

Healing Inspired by Nature. Proven Through Science.

Bring the natural properties of human birth tissue to your surgical patients as an innovative adjunctive option to help support healing.¹

Achieving successful outcomes depends on effectively managing three surgical goals: **modulating inflammation, supporting nerve & vascular recovery, and minimizing scarring & adhesions.**

The Clarix family of allografts may help:¹⁻¹²

- Mitigate wound complications
- Facilitate functional recovery
- Support expedited wound healing
- Manage adhesions

The Clarix® line of human Cryopreserved Amniotic Membrane (CAM) allografts help support regenerative healing & functional recovery across a wide array of surgical wound and soft tissue applications as an adjunct.¹⁻¹²

- Complex bone & joint reconstruction
- Soft tissue repair & reconstruction
- Nerve repair & decompression
- Joint arthroplasty & arthrodesis
- Fracture & nonunion surgery
- Traumatic wounds & reconstruction
- Wound healing & dehiscence
- Post-stricture excision
- Fistula repair
- Fibroid removal

Preserving as much of nature as possible:

For over 40 years, BioTissue®'s pioneering scientists have focused on understanding the regenerative features of human birth tissue—ultimately identifying HC-HA/PTX3 as a key complex orchestrator in human birth tissue regenerative healing.¹

Our CryoTek® cryopreservation process has been shown to preserve the structural & functional integrity of the HC-HA/PTX3 complex significantly better than heat dehydration—delivering those qualities of the natural tissue to help manage healing.¹⁻¹²

BioTissue products are safe as evidenced by 1.2M+ human clinical applications that have been studied in more than 440 peer-reviewed publications.

The BioTissue family of allografts has two options based on your surgical needs:

Clarix 1K

- Clarix 1K is a cryopreserved, ultra-thick human amniotic membrane allograft derived from umbilical cord applied as an adjunct for surgical applications.
- Clarix 1K supports improved surgical wound healing.³⁻⁷
- Up to 10x thicker than amniotic membrane only, which may increase the longevity in the surgical site.⁸

Clarix 100

- Clarix 100 is a thinner cryopreserved version of our human amniotic membrane.
- Clarix 100 is ideal for surgical applications that favor a minimal approach/incision, or where space is anatomically compromised.
- Clarix 100 allografts are delivered on a non-implantable, gridded paper backing, for easier handling & application.

The BioTissue Difference

Clarix 1K Cryopreserved Ultra-Thick Amniotic Membrane Allograft						Clarix 100 Cryopreserved Amniotic Membrane Allograft
